

French student at Polytech Marseille, France & University of Quebec, Canada.

Seeking End-of-Studies Internship in Data Engineering & LLM Integration

To whom it may concern,

I am writing to express my interest in a Data Engineering internship within your company. I am currently completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

I came across the Bank Support Worker position at Maes-y-Wennol Care Home in Wales and wanted to reach out directly, as I am actively seeking a Data Engineering internship in the UK. While this role is not aligned with my technical background, I noticed your company's presence in Wales and wondered if there might be opportunities for an internship in data or cloud engineering within your organization. My studies and projects have focused on building production-grade ELT pipelines and LLM-powered data systems, and I am eager to contribute these skills in a professional setting. Additionally, this would be a valuable chance for me to improve my English and adapt to a new work environment.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, and am working in parallel on personal projects related to the concepts covered in each chapter.

I have built a complete pipeline for tracking job postings and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay), with LLM integration for data extraction, and interactive data visualization and pipeline monitoring. I encountered numerous technical challenges and consistently found alternative approaches or solutions to overcome them. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

During an internship, I would be particularly interested in working on cloud-based data infrastructure, such as designing or optimizing ETL/ELT pipelines, implementing data observability tools, or integrating LLM workflows into existing systems. My experience with Apache Airflow, Docker, and AWS (currently pursuing certification) aligns with the technical challenges I enjoy tackling, and I am keen to apply this knowledge in a real-world setting. Even if the team's current focus is not on these areas, I would welcome the opportunity to explore how my skills could support or enhance your data operations.

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
