Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Lucy Renault,

I am writing to express my interest in a Data Engineering internship within your company, ideally starting between late 2026 and early 2027. I am currently completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

The GenAI Forward-Deployed Engineer II position posted by Google in Buenos Aires immediately caught my attention, as it aligns closely with my focus on cloud data engineering and LLM integration. While my profile is still developing toward a mid-level role, I am eager to explore whether an internship opportunity might exist within your team, particularly one that allows me to contribute to production-grade AI solutions. Working in Argentina would also be a valuable chance to actively improve my Spanish, complementing my technical growth. What excites me most about this role is the opportunity to tackle data readiness challenges and state-management hurdles in real-world pipelines, areas where my experience with Airflow, medallion architectures, and LLM workflows could directly apply. I'd love to bring my hands-on work with cloud infrastructure and data observability to projects that bridge cutting-edge AI products with scalable, enterprise-ready systems.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, and am working in parallel on personal projects related to the concepts covered in each chapter.

I have built a complete pipeline for tracking job postings and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay), with LLM integration for data extraction, and interactive data visualization and pipeline monitoring. I encountered numerous technical challenges and consistently found alternative approaches or solutions to overcome them. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshipplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
