

French student at Polytech Marseille, France & University of Quebec, Canada.

Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Lucy Renault,

I am writing to express my interest in a Data Engineering internship within your company, ideally starting between late 2026 and early 2027. I am currently completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

The GenAI Forward-Deployed Engineer position posted by Google in Buenos Aires immediately caught my attention, as it aligns closely with my focus on cloud data engineering and LLM integration. While the role is targeted at a more experienced level, I'm reaching out to explore whether an internship opportunity might exist for someone with my background, particularly given my ongoing work with production-grade ELT pipelines and LLM workflows. The chance to contribute to enterprise AI solutions while immersing myself in a Spanish-speaking environment would be invaluable, as it would allow me to actively improve my language skills while applying my technical knowledge. What excites me most about this role is the opportunity to tackle data readiness challenges and state-management hurdles, areas where my experience with Airflow, Docker, and cloud architectures, especially AWS and Google Cloud, could directly contribute to building robust, scalable systems.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, and am working in parallel on personal projects related to the concepts covered in each chapter.

I have built a complete pipeline for tracking job postings and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay), with LLM integration for data extraction, and interactive data visualization and pipeline monitoring. I encountered numerous technical challenges and consistently found alternative approaches or solutions to overcome them. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
