

French student at Polytech Marseille, France & University of Quebec, Canada.

Seeking End-of-Studies Internship in Data Engineering & LLM Integration

To whom it may concern,

I am writing to express my interest in a Data Engineering internship within your company. I am currently completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

When I came across the Wintel Infrastructure SRE posting in Buenos Aires at J.P. Morgan, I knew it was worth reaching out—even though my focus is on securing a Data Engineering internship. Your team's work on scalable infrastructure and end-to-end monitoring resonates deeply with my academic and project experience, particularly as I design and operate production-grade ELT pipelines and cloud-based data systems. Buenos Aires is also a city I've grown familiar with through my InternshipLatam project, and I'd love the chance to contribute on-site while actively improving my Spanish in a professional setting. I'm reaching out to ask whether there might be an internship opportunity aligned with my profile, as I'm eager to bring my skills in data engineering and LLM integration to a team like yours.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, and am working in parallel on personal projects related to the concepts covered in each chapter.

I have built a complete pipeline for tracking job postings and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay), with LLM integration for data extraction, and interactive data visualization and pipeline monitoring. I encountered numerous technical challenges and consistently found alternative approaches or solutions to overcome them. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

What excites me most about this kind of role is the opportunity to work on the intersection of infrastructure and data systems—especially building and optimizing pipelines that handle large-scale, real-time data. My hands-on experience with Docker, Airflow, and cloud architectures (AWS and Backblaze B2) has given me a strong foundation in designing cost-efficient, observable systems, while my work with LangGraph and LLMs has shown me how powerful it can be to integrate intelligent workflows into data processes. I'd be particularly interested in contributing to projects that involve data observability, automation, or the kind of

robust infrastructure that ensures pipelines run smoothly at scale—areas where I can both apply my existing skills and grow my expertise in cloud-native engineering.

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
