Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Sumon Sengupta,

I am writing to express my interest in a Data Engineering internship within your company, ideally starting between late 2026 and early 2027, to complete a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

I came across the Senior Power Platform Developer position posted by EY in Buenos Aires, and while my background is rooted in data engineering and LLM integration, I was immediately drawn to the opportunity to explore how my skills might align with your team's work. Argentina holds a special place for me, not only because of my ongoing project tracking the Data Engineering market in Latin America, but also as a country I've grown to appreciate through its culture and professional landscape. Though my Spanish is still elementary, I see this as a chance to immerse myself in a new environment while contributing to meaningful projects. Given the seniority of the role, I'm reaching out to inquire whether an internship opportunity might exist for someone with my profile, one where I could grow alongside your team while bringing my enthusiasm for cloud data systems and automated pipelines.

Technically, I'm particularly interested in opportunities that involve designing and scaling data pipelines, integrating LLM workflows, or optimizing cloud infrastructure, areas where my experience with Airflow, Docker, and AWS could add value. While the Power Platform isn't part of my current toolkit, I'm eager to tackle new challenges, whether that means working on data residency solutions, automating integrations, or contributing to the development of secure and scalable data systems. My hands-on experience building end-to-end ELT pipelines, from ingestion to visualization, has given me a strong foundation in solving complex data problems, and I'd love to apply that mindset to projects that push the boundaries of what's possible in data engineering.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, which is still on going and I am working in parallel on personal projects related to the concepts covered in each chapter.

I have built a complete pipeline for tracking job postings and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay), with LLM integration for data extraction, and interactive data visualization and pipeline monitoring. I encountered numerous technical challenges and consistently found alternative approaches or solutions to overcome them. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
