

French student at Polytech Marseille, France & University of Quebec, Canada.

Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Lucy Renault,

I am writing to express my interest in a Data Engineering internship within your company, ideally starting between late 2026 and early 2027, to complete a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration.

The GenAI Forward-Deployed Engineer II position posted by Google in Buenos Aires immediately caught my attention, as it aligns closely with my academic focus and professional aspirations in data engineering and LLM integration. While the role is targeted at a more senior level, I am reaching out to explore whether an internship opportunity might exist for someone with my profile, particularly as I prepare to complete my master's degree in computer science with a specialization in cloud data engineering and LLM workflows. Living and working in Argentina would be an incredible opportunity for me to immerse myself in a new cultural and professional environment, further develop my Spanish, and contribute to impactful projects in a region I am deeply curious about. This experience would not only allow me to grow technically but also broaden my perspective as an engineer.

Technically, I am particularly drawn to the challenges of integrating production-grade AI systems with robust data infrastructure, which is a core aspect of this role. My experience building end-to-end ELT pipelines, orchestrating workflows with Apache Airflow, and leveraging LLMs for data transformation and enrichment has given me a strong foundation in the kind of work this position demands. I am eager to deepen my expertise in cloud-native architectures, particularly with Google Cloud, and to tackle problems like data readiness and state management in large-scale AI deployments. The opportunity to work on frontier AI products while ensuring their reliability and scalability would be an exciting next step in my journey as a data engineer.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, which is still on going and I am working in parallel on personal projects related to the concepts covered in each chapter's concepts. In particular, I have built a complete pipeline in Python for tracking job postings via APIs and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay). It combines cloud orchestration (VPS & Airflow), storage (Backblaze B2 & Neon PostgreSQL) and data visualization & pipeline monitoring (Streamlit Cloud), and LLM integration for data transformation, an interactive dashboard agent and automated job applications. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
