Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Sumon Sengupta,

I am writing to express my interest in a Data Engineering internship within your company. I am completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration, and am seeking a 6-month end-of-studies internship, ideally starting between late 2026 and early 2027.

The Data Engineer position posted by EY in Buenos Aires immediately caught my attention, as it aligns closely with my academic focus and professional aspirations. While the role is targeted at a mid-level position, I am reaching out to explore whether an internship opportunity might exist for someone with my profile, particularly given my hands-on experience in building production-grade ELT pipelines and integrating LLM workflows. Buenos Aires is a city I've long admired for its vibrant culture and dynamic tech ecosystem, and contributing to a team there would be an incredible opportunity to grow both professionally and personally. Additionally, as I continue to develop my Spanish skills, this experience would allow me to immerse myself in a new linguistic and cultural environment, further enriching my perspective.

Technically, I am eager to contribute to projects that involve designing and optimizing data pipelines, particularly those leveraging cloud infrastructure and large-scale data processing. My experience with tools like Apache Airflow, Docker, and AWS, along with my ongoing certification in AWS Data Engineering, positions me well to support workflows that require robust ELT/ETL processes, data modeling, and observability. I'm particularly interested in opportunities to work on pipelines that handle complex data transformations or integrate LLM-based workflows, as these areas align with my academic research and personal projects. The chance to collaborate on systems that balance scalability, cost efficiency, and reliability would be an exciting challenge for me.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, which is still on going and I am working in parallel on personal projects related to the concepts covered in each chapter's concepts. In particular, I have built a complete pipeline in Python for tracking job postings via APIs and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay). It combines cloud orchestration (VPS & Airflow), storage (Backblaze B2 & Neon PostgreSQL) and data visualization & pipeline monitoring (Streamlit Cloud), and LLM integration for data transformation, an interactive dashboard agent and automated job applications. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshiplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
