Seeking End-of-Studies Internship in Data Engineering & LLM Integration

Dear Sumon Sengupta,

I am writing to express my interest in a Data Engineering internship within your company. I am completing a dual French-Canadian engineering degree, specializing in Cloud Data Engineering and LLM Integration, and am seeking a 6-month end-of-studies internship, ideally starting between late 2026 and early 2027.

The Data Engineer position posted by EY in Buenos Aires immediately caught my attention, as it aligns closely with my academic focus and professional aspirations. While the role is targeted at a mid-level position, I am reaching out to explore whether an internship opportunity might exist for someone with my profile, particularly given my hands-on experience in building production-grade ELT pipelines and LLM-integrated data systems. Living and working in Argentina would be a meaningful opportunity for me, both professionally and personally, as I am eager to immerse myself in a new cultural and work environment. My Spanish skills, though still developing, would allow me to engage more deeply with the team and local context, and I see this as a chance to grow both technically and linguistically.

Technically, I am particularly interested in contributing to projects that involve designing and optimizing data pipelines, especially those leveraging cloud infrastructure and large-scale data processing. My experience with tools like Apache Airflow, Docker, PostgreSQL, and AWS aligns well with the demands of modern data engineering, and I am eager to apply this knowledge in a real-world setting. Additionally, I am fascinated by the potential of LLM-powered workflows to enhance data transformation and automation, and I would love the opportunity to work on systems that integrate these capabilities. Building scalable, observable, and cost-efficient pipelines is something I am deeply passionate about, and I would welcome the chance to collaborate on such challenges.

I recently began the AWS Data Engineering Professional Certificate by DeepLearning.AI, which is still on going and I am working in parallel on personal projects related to the concepts covered in each chapter's concepts. In particular, I have built a complete pipeline in Python for tracking job postings via APIs and monitoring the Data Engineering market in Latin America (Argentina, Chile, Uruguay). It combines cloud orchestration (VPS & Airflow), storage (Backblaze B2 & Neon PostgreSQL) and data visualization & pipeline monitoring (Streamlit Cloud), and LLM integration for data transformation, an interactive dashboard agent and automated job applications. I found it genuinely fascinating to design an architecture that balances both technical constraints and cost efficiency, turning each obstacle into an opportunity to refine the system further. You can view the live dashboard here: internshipplatam.streamlit.app/

I would welcome the opportunity to discuss how my skills could contribute to your team. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Roland OUCHERIF
